# Intro of AC

Becoming diaspora financial platform from AU:
instant remittance → leasing → deposits.

The problem

# Demand in AU is surging in an immigrant nation

## Record demand base, today

31.5% of Australia's population (8.6m people) immigrants and visa holders. 2024—an all-time modern high with 12.0B in 2024 retail outbounds.

## Remittance from Australia are still costly

Global average cost to send remittance is approx. 6.5% in 2025; Banks averaged 14.6%, far above digital MTO's.
Too much due to hidden FX margins and confusing pricing.

## Choice is constrained in niche corridors

RBA notes digital MTO's don't serve many smaller corridors, and correspondent banking makes transfer slow and expensive.
Language, compliance friction, low ticket size, no local trust

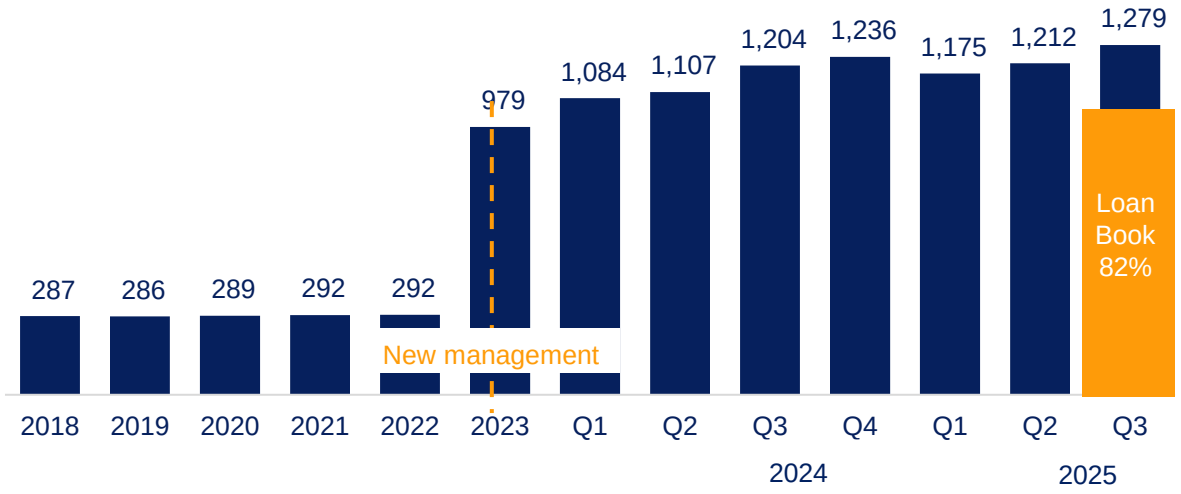
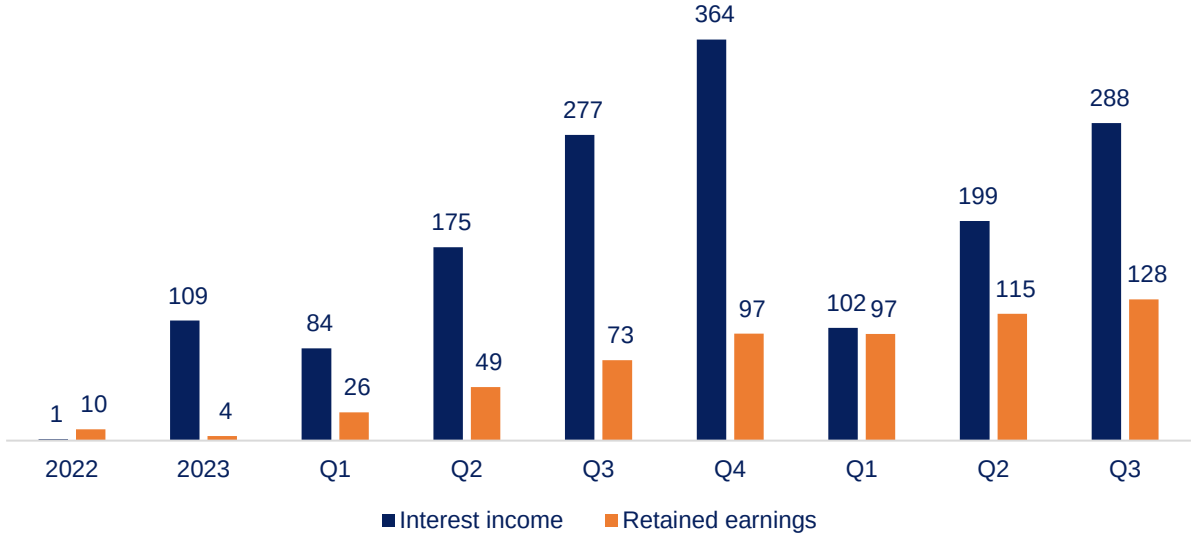
# Profitable lender base powering our fintech rollout.

Asset size



Total income vs Retained earnings



**Loan**

- FRC-licensed NBFI lender in Mongolia with a profitable, well-capitalized loan book the operating base for diaspora leasing.

**Snapshot (HY-2025)**

- Assets: $1,212k, Loan book: 82% of assets
- Capital: Equity $930k, Retained earnings $148k, Bonds $273k
- Regulatory health: CAR 65%, Liquidity 22%

**Profitability**

- ROE 13.9%, ROA 8.8% (FY-2024)
- Retained earnings up each quarter on growing interest income

**Why this matters for fintech**

- A performing loan book + credit discipline in Mongolia gives us data and risk muscles to launch diaspora leasing from day one.
- This balance sheet is the engine for diaspora leasing
